

PSP-STD-001

Peach Suite Pro Development Standards Manual

Version 1.0 (Draft)

Purpose

Establish consistent development, design, deployment, security, and documentation standards for Peach Suite Pro.

Core Principles

- Information over decoration.
- Consistency over cleverness.
- The business owner remains in control.
- AI assists; it never makes business decisions.
- Archive before Delete whenever practical.
- Build once, reuse everywhere.
- Protect customer data by default.

User Interface Standards

- Calm desktop application appearance.
- Small, readable fonts.
- Minimal bold text.
- Generous white space.
- Consistent spacing and alignment.
- Follow the 'Neighbor Test': if the neighbor across the street can read it, it is too large.

Development Standards

- Reuse templates, CSS, and components whenever possible.
- Prefer descriptive route and function names.
- Keep business logic out of templates.
- Every new feature should include appropriate help documentation.
- Remove obsolete code when safely replaced.

Database Standards

- Use consistent naming conventions.
- Prefer archive (soft remove) before permanent deletion.
- Track created_at and updated_at where appropriate.

Security Standards

- Least-privilege access.
- No back-door access.
- Protect business and customer data.
- Maintain audit logging for important administrative actions.

Release Policy

- Production releases occur Tuesday evenings.
- No routine Friday production releases.
- Complete the Release Checklist before every deployment.
- Monitor production the following business day.

Documentation Standards

- Maintain user-facing help.
- Maintain internal standards.
- Write release notes for every production release.
- Keep documentation current with the software.

Revision History

Version 1.0 - Initial draft.
